

College Wifi On Android Devices

Android devices can vary by model, hence the instructions might not be exact

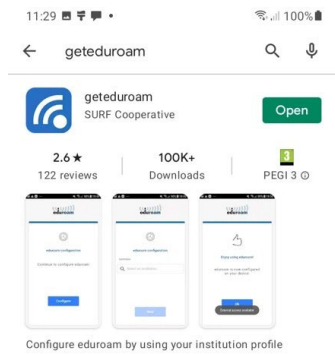

First connect to Eduroam then install the college certificate.

If the android 11 instructions don't work try the android 10 instructions and vice versa.

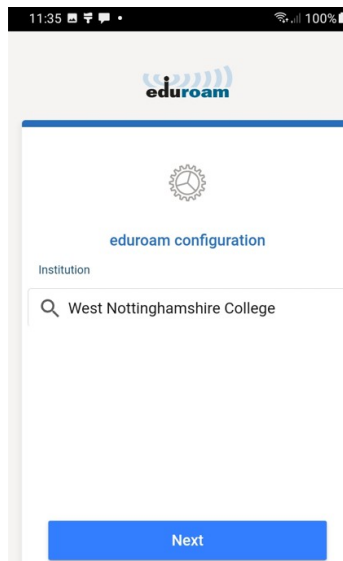

Adding Eduroam

Android 11

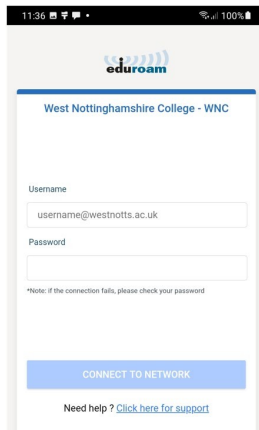

Goto the play store and install the get Eduroam app

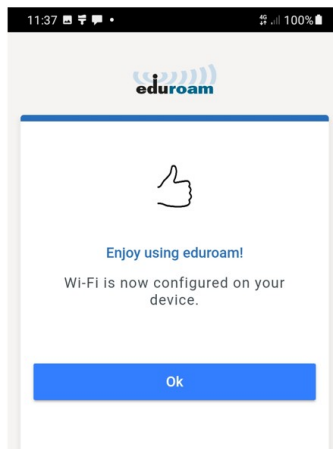

Run the app and search for west Nottinghamshire college on the institution page and next

Sign in with username @westnotts.ac.uk (eg. Abc2021000@westnotts.ac.uk) and your regular college password

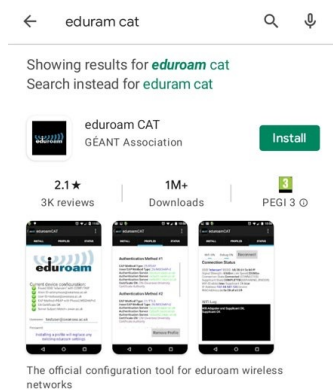

This should add Eduroam to the wireless networks with all the settings and connect when onsite

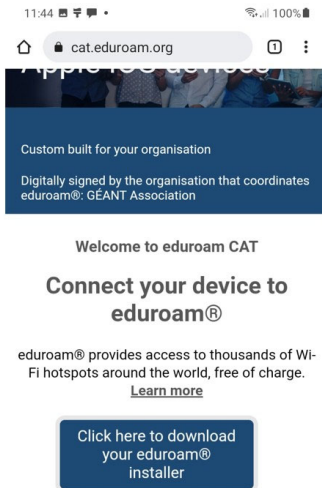

Android 10 and below

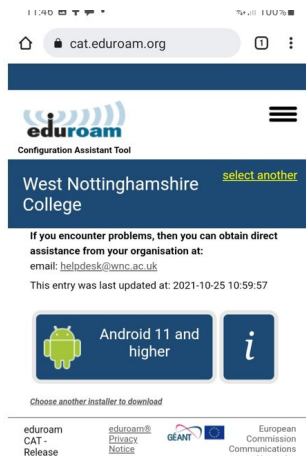

Firstly go to the play store and search for the Eduroam cat app and install

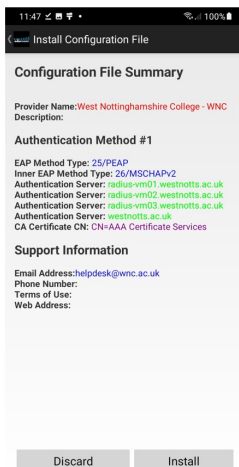

Then browse the internet and search for the Eduroam cat webpage <https://cat.eduroam.org> Select the Eduroam installer option – search for west Nottinghamshire college in the list

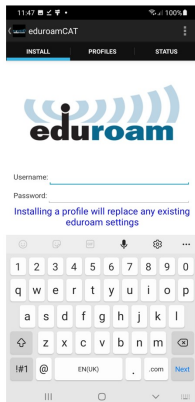

Select the blue button for the version of the phone.

Once the file is downloaded open it with the Eduroam cat app from the play store and select install

Then enter your username @westnotts.ac.uk (eg. Abc2021000@westnotts.ac.uk) and use your regular password.

Adding the College Certificate

This may vary depending on the version of android and model of phone

Download the College certificate from <https://wnc.ac.uk/ssl-cert>

Open settings

Go to security

Go to encryption and credentials and install from storage

Select CA certificate

Accept the warning and if required enter your pin

Browse to the downloaded file and select it

If you are prompted for a certificate name use “sslinspection.crt”
